

# 3M<sup>™</sup> Full Face Respirator 6000 Series

#### **Technical Data Sheet**

#### **Main Features**

The 3M<sup>™</sup> 6000 Series Full Face Masks are proven to be simple to handle and comfortable to the wearer. The exhalation port provides increased durability, easy cleaning and reduced breathing resistance which helps to increase your comfort. Available in three sizes, all masks have the 3M bayonet connection system allowing connection to a broad range of twin lightweight filters to protect against gases, vapours and particulates depending on your individual needs.

#### The main features include:

- Reusable, low maintenance respirator.
- Lightweight, well-balanced with soft silicone nose cup ensures comfort during long periods of work.
- Flexible System (gas & vapour and / or particulate filters plus Supplied-Air option).
- Twin filter design provides lower breathing resistance, a more balanced fit, and improves field of vision.
- Safe, secure bayonet filter attachment system.
- Wide field of vision with a scratch and chemical resistant polycarbonate lens.
- Easy and secure fitting.
- 3 sizes (small 6700, medium 6800, large 6900)
- Spectacle kit available.
- Face piece weight: 400 grams.

# **Applications**

The 6000 Series Respirators can be used with a variety of different filter options:

Gas and Vapour Filters only: The filters generally protect against either single or multiple contaminant type(s).

 The 3M<sup>™</sup> Gas and Vapour Filters 6000 Series filters fit directly onto the respirator.

Particulate filters only: These filters provide protection against solid and non-volatile liquid particles.

- The 3M<sup>™</sup> Particulate Disc Filters 2000 series fit directly onto the respirator.
- The 6035 & 6038 are encapsulated P3 filters, which fit directly onto the respirator.

## Combination of Gas & Vapour and Particulate filters:

- The 3M<sup>™</sup> Particle Filters 5000 Series can be used with 6000 Series Gas and Vapour filters using 501 retainers excluding the 6035, 6038, 6096, 6098 and 6099.
- The 6096, 6098 and 6099 have Particulate filter media integrated with the Gas and Vapour cartridge.
- The 6038 is an encapsulated particulate filter with a layer of carbon for low capacity gas protection.

# Gas and Vapour Filters:

| FILTER             | IMAGE | STANDARD            | CLASS                  | HAZARD  | SUGGESTED INDUSTRY EXAMPLES  |

# **Approvals**

These respirators have been produced to comply with the requirements of the Australian /New Zealand Standard AS/ NZS 1716:2012 under an agreed production certification scheme operated during manufacture in accordance with the SAI Global Standards Mark programme.

#### **Standards**

These products have been tested to the relevant Australian/ New Zealand Standards:

- 6000 Series Full Face Masks to AS/NZS 1337:1992 High Impact and protection from hot solids.
- 6000 Series Gas and Vapour filters to AS/NZS 1716:2012.
- 2000 and 5000 Series and 6035, 6038 Particulate filters to AS/NZS 1716:2012.

# **Correct Usage**

When the 6000 Series Full Face Mask is fitted with Gas & Vapour Filters:

- 6000 Series gas and vapour filters may be used in concentrations of gases or vapours (types specified by 3M) up to 50x the Exposure Standard (WES) or 1000ppm (100x WES or 5000ppm for 6055 and 6099) whichever value is lower.
- 6075 offers protection against organic vapour (as above) and 10ppm formaldehyde only.
- 6098 filters please see Instructions for Use or contact 3M for further information.
- 6000 Series gas and vapour filters should not be used to protect the wearer against a gas or vapour that has poor warning properties (smell or taste).

When the 6000 Series Full Face Mask is fitted with Particulate Filters:

- 5925, 2125 or 2128 filters may be used in concentrations of particulates up to 50x WES.
- 5935, 2135, 2138 or 6035, 6038 may be used in concentrations of particulates up to 100x WES.
- 2128 and 2138 filters may be used to protect against ozone up to 10x WES and offers relief from acid gases and organic vapours at levels below the WES.
- 6038 offers protection against30ppm Hydrogen Fluoride and offers relief from ozone, acid-gases and organic vapours at levels below the WES.

# **Cleaning and Storage**

- Cleaning is recommended after each use.
- Disassemble by removing the filters, head straps and other parts.
- Clean and sanitise the mask (excluding filters) using 3M<sup>™</sup> 504 Cleaning Wipes or immersing in warm cleaning solution (<50°C) and scrubbing with a soft brush until clean. Parts may also be cleaned in a domestic washer.</li>
- Disinfect respirator by soaking in a solution of quaternary ammonium disinfectant or sodium hypochlorite (30 ML household bleach in 7.5L of water) or other disinfectant.
- Rinse in fresh, warm water and air-dry in noncontaminated atmospheres.
- ⚠ Water temperature should not exceed 50°C.
- Do not use cleaning agents that contain lanolin or other oils.
- ⚠ Do not autoclave.

## **Maintenance**

The 6000 Series Full Face Masks must be inspected before each use to ensure it is in proper operating condition. Any damaged or defective part must be replaced before use.

The following procedure is suggested.

- Check the face mask for cracks, tears and dirt. Examine the inhalation valves for signs of distortion, cracking or tearing.
- Check that the head straps are intact and have good elasticity.
- Examine all plastic parts and gaskets for signs of cracking or fatigue and replace if necessary.
- 4. Remove the exhalation valve cover and examine the exhalation valve and seat for sign of dirt, distortion, cracking, or tearing. Replace the valve if necessary. Secure the valve cover prior to use.

#### **Use Limitations**

- These respirators do not supply oxygen. Do not use in oxygen deficient areas.\*
- Do not use for respiratory protection against contaminants with poor warning properties, are unknown or immediately dangerous to life and health (IDLH) or contaminants which generate high heats of reaction with chemical filters.
- 3. Do not misuse, alter, modify or repair this product.
- 4. Do not use with beards or other facial hair that prevent direct contact between the face and the edge of the respirator.
- Do not use with unknown concentrations of contaminants.
- 6. Do not use for escape purposes.
- 7. Leave the work area immediately and check the integrity of the respirator and replace face mask if:
  - Damage has occurred or is apparent.
  - Breathing becomes difficult or increased breathing resistance occurs.
  - Dizziness or other distress occurs.
  - You taste or smell the contaminant or an irritation occurs.
- 8. Store this device in a sealed container away from contaminated areas when not in use.
- Use strictly in accordance with respirator and filter user instruction leaflet.

# **Fitting Instructions**

Before assigning any respirator to be worn in a contaminated area, we recommend that a qualitative or quantitative fit test be performed before entering the workplace. Fitting instructions must be followed each time the respirator is worn.

- Fully loosen all four head straps, and then place the harness at back of head and position respirator over the face.
- Pull the ends of the four straps to adjust tightness, starting with the neck straps first, then the forehead straps.
- $\triangle$  Do not over tighten the head straps.

#### **Fit Check**

Perform a positive and/or negative pressure fit check each time the respirator is worn.

#### Positive pressure Face Fit check

- Place the palm of the hand over the exhalation valve cover and exhale gently.
- 2. If the respirator bulges slightly and no air leakage between the face and the respirator is detected, a proper fit has
- If air leakage is detected, reposition the respirator on the face and/or re-adjust the tension of the strap to eliminate the leakage.
- 4. Repeat the above face fit check.
- 5. If you cannot achieve a proper fit, do not enter the contaminated area. See your supervisor.

# Negative pressure face fit check (3M<sup>™</sup> 6035, 6038 / 2000 Series Filters)

- Push the filter cover down (6035, 6038) or press your thumbs into the central indentation of the filters (2000 series), inhale gently and hold your breath for five or ten seconds.
- 2. If the respirator collapses slightly, a proper fit has been achieved.
- 3. If air leakage is detected, reposition the respirator on the face and/or re-adjust the tension of the straps to eliminate the leakage.
- 4. Repeat the above face fit check.
- 5. If you cannot achieve a proper fit, do not enter the contaminated area. See your supervisor.

<sup>\* 3</sup>M definition minimum 19.5% by volume oxygen

#### **Materials**

| Part                               | Material                   |
|------------------------------------|----------------------------|
| Face Mask                          | Silicone                   |
| Head Harness                       | Polyethylene               |

3M offers advice on the selection of products, and training in the correct fitting and usage.

For more information on 3M products and services please call the 3M TechAssist Helpine, 3M Australia 1800 024 464

## Warning

Selection of the most appropriate respiratory protective equipment (RPE) will depend on the particular situation and should be made only by a competent person knowledgeable of the actual working conditions and the limitations of RPE. Details regarding performance and limitations are set out in this technical bulletin as well as on the respirator packaging and user instructions. Before using any respirator, the wearer must read and understand the user instructions for the product. Specific legislation must be observed. If in doubt, contact a safety professional or 3M.

# **Important Notice**

To the extent permitted by law, 3M shall not be liable for any loss or damage including any loss of business, loss of profits, or for any indirect, special, incidental or consequential loss or damage arising from reliance upon any information herein provided by 3M. Nothing in this statement will be deemed to exclude or restrict 3M's liability for death or personal injury arising from its negligence.
